19" Super Performance

The BenQ FP91GX 19" LCD display delivers high resolution and enhanced brightness for excellent picture quality in an ultra-stylish design. Delivering 270 cd/m2 brightness, a 550:1 contrast ratio and super fast 4ms gray-to-gray response time, the FP91GX is perfect for PC game applications.

4ms Gray-to-Gray response time

The FP91GX employs original Advanced Motion Accelerator (AMA) technology that accelerates the twisting speed of liquid crystal by increasing the voltage, making it possible to shorten the gray-to-gray response time and keep images ghost-free. It's ideal for gaming, home entertainment and other applications that require superior display performance.

D-sub/DVI dual input

Equipped with both traditional D-Sub and next-generation DVI input support, the FP91GX provides the best possible picture quality and video performance regardless of whether you are working with analog or digital input
